[RUSH] MESSAGE: _____

Claims 7 and 19 (original 23 and 26) do
not end with a period.
Thank you

[XRUSH] RESPONSE: _____

Done

INITIALS [Signature]

NOTE: This form will be included as part of the official USPTO record, with the Response document coded as XRUSH.
 REV 10/04

24. (New) The bomb, missile or torpedo of claim 8 wherein the bomb, missile or torpedo comprises an activation circuit electrically coupled to the solenoid coil, the activation circuit providing power to the solenoid coil to actuate the plunger within the locking device housing.
25. (New) The bomb, missile or torpedo of claim 24 wherein the activation circuit comprises a power source and a switch electrically coupled to the solenoid coil, the power source and the switch transmitting power to the solenoid coil to actuate the plunger within the locking device housing.
26. (New) The airborne device of claim 14 wherein the plunger comprises a release element to manually actuate the plunger within the locking device housing and move the locking ball into the recess in the plunger to release the locked member .
27. (New) The airborne device of claim 14 wherein the airborne device comprises an activation circuit electrically coupled to the solenoid coil, the activation circuit providing power to the solenoid coil to actuate the plunger within the locking device housing.
28. (New) The airborne device of claim 27 wherein the activation circuit comprises a power source and a switch electrically coupled to the solenoid coil, the power source and the switch transmitting power to the solenoid coil to actuate the plunger within the locking device housing.

5-5-05

20. (Original) The airborne device of claim 15, further comprising a biasing device for biasing the second member into the release position, wherein the biasing device exerts at least about 150 pounds on the second member.
21. (New) The locking device of claim 1 wherein the plunger comprises a release element configured to allow manual actuation of the plunger within the housing.
22. (New) The locking device of claim 1 wherein:
the solenoid coil comprises a first solenoid coil and a second solenoid coil;
the one or more locking balls comprises a first set of locking balls and a second set of locking balls, the first set of locking balls disposed in a first aperture in the housing and the second set of locking balls disposed in a second aperture in the housing; and
the second portion of the plunger defining a first recess to receive the first set of locking balls and a second recess to receive the second set of locking balls, the first solenoid coil actuating the plunger to align the first recess with the first set of balls and allow the first set of balls to move into the first recess in the plunger and the second solenoid coil actuating the plunger, subsequent to actuation by the first solenoid coil, to align the second recess with the second set of balls and allow the second set balls to move into the second recess in the plunger to release the locked member.
23. (New) The bomb, missile or torpedo of claim 8 wherein the plunger comprises a release element to manually actuate the plunger within the locking device housing and move the locking ball into the recess in the plunger to release the locked member ,
